Capstone Design Project

Visualization Simulator for Cosmetic Manufacturing Vessels Using Manufacturing Data

Smart Factory Capstone Design 1 / Team 12

Developed a Population Balance Model (PBM)-based simulator with multiple quality indicators to predict and judge scale-up emulsification quality in cosmetic emulsion manufacturing vessels (CEVSim).

- Responsible for results analysis and project management
- Analyzed droplet size distribution data to evaluate emulsion quality and predict manufacturing outcomes
- Project outcomes resulted in a pending patent application and a registered software work (see Research Outcomes below)

Research Outcomes

Patent Application Under Examination

Method and System for Predicting and Determining Scale-up Emulsification Quality of Cosmetic Emulsion Manufacturing Vessels Using a Population Balance Model and Multiple Quality Indicators

- Applicant: Sungkyunkwan University Industry-Academic Cooperation Foundation
- Inventors: Jeong Jongpil, Kang Mingyu, **Lee Seou**, Lee Hakseung
- Reference No.: R-2026-0578-KR-1

Software Registration — CEVSim Registered

Cosmetic Emulsification Vessel Scale-Up Simulator — Computer Program Work, Application Software / Industrial S/W

- Authors: Jeong Jongpil, Yoo Jaekyung, Kang Mingyu, **Lee Seou**, Lee Hakseung
- Registration No.: C-2026-030863 · Accession No.: 2026-032760
- Registered: June 23, 2026 (created May 29, 2026)

Research Papers

Scale-Up Simulation of Cosmetic Emulsion Manufacturing Vessels (100/300/500 L) Using a Population Balance Model: Integrated Multi-Metric Analysis of Droplet Size Distribution, Uniformity, Viscosity, and Hardness

Team 12 / Manuscript Submitted

Jeong Jongpil, Yoo Jaekyung, Kang Mingyu, **Lee Seou**, Lee Hakseung — manuscript prepared from the capstone project results, submitted for double-blind peer review (2026).

CFD simulation of a Rushton turbine stirred-tank using open-source software with critical evaluation of MRF-based rotation modeling

Individual / Mar. 2026
